OKTA CONFIGURATION GUIDE

Supported Features

The CompuMed Okta integration allows logging in through the Okta dashboard using Identity Provider (IDP)-Initiated Authentication (SSO) Flow.

Requirements

A request must be made to support@compumedinc.com to enable the Okta integration.

Configuration Steps

From the CompuMed Portal app Sign On settings, please copy the **Client ID** and **Client secret**.

The screenshot shows the 'Settings' page for an application in Okta. At the top right is an 'Edit' button. The main section is titled 'SIGN ON METHODS' and includes a descriptive paragraph: 'The sign-on method determines how a user signs into and manages their credentials for an application. Some sign-on methods require additional configuration in the 3rd party application.' Below this is a link: 'Application username is determined by the user profile mapping. [Configure profile mapping](#)'. The 'OpenID Connect' method is selected. It has two fields: 'Client ID' with a value of '[Your Client ID]' and a copy icon; and 'Client secret' with a value of '[Your Client Secret]', a lock icon, and a copy icon. Descriptions are provided for both fields: 'Public Identifier for the client that is required for all OAuth flows.' and 'Secret used by the client to exchange an authorization code for a token. This must be kept confidential! Do not include it in apps which cannot keep it secret, such as those running on a client.'

Next, Edit the settings and enter your **Tenant Name**. This can be found from your Okta URL.

ADVANCED SIGN-ON SETTINGS

These fields may be required for a CompuMed Portal proprietary sign-on option or general setting.

Tenant Name

Please enter your tenant name. For example, if your Okta URL is:
`https://acome.okta.com,`
enter: `acme`

After saving, email support@compumedinc.com with **Okta** in the subject, and the following fields:

Client ID: [copied from settings]

Client Secret: [copied from settings]

Tenant Name: [created in settings]

You will receive a confirmation email once the configuration has been completed. From there, you may assign the CompuMed Portal app to users or groups in the *Assignments* tab.

Notes

Signing into the CompuMed Portal using Okta currently supports only signing in through Okta directly. SP-initiated SSO is not currently supported.
