

CARDIAC MONITORING PATCH

Long-Term Cardiac Monitoring in Correctional Healthcare Requires Specific Solutions

Extended ambulatory cardiac monitoring gives you a larger and clearer window into your patient's heart rhythm. Up to 14 days of uninterrupted monitoring helps ensure you don't miss critical information.

NO WIRES!

A cardiac monitoring patch provides a clean, uninterrupted signal with minimal effort or disruption to your patient. Your data will not be interrupted by patients showering, exercising or sleeping.

PROVEN CLINICAL ACCURACY

Avoid critical knowledge gaps from poor signal quality and data interruptions. Uninterrupted monitoring gives you the assurance of reliable data with minimal artifact. This patch enables a median 99% analyzable time.

FLEXIBLE MONITORING TIME

Eliminate the hassle of repeated, inconclusive tests. The patches flexible monitoring time allows you to choose the best time frame for your patient and capture all the data you need.

In a single test, find answers for:

- **Patients with infrequent symptoms**
- **Patients with intermittent symptoms**
- **Suspected asymptomatic patients**
- **Post-stroke monitoring**
- **Post-procedure monitoring**
